EDUCATION

University of California, Berkeley

B.A. in Data Science & Economics

Aug 2020 – May 2024

Berkeley, CA

- Selected Coursework: Machine Learning, Probability, Econometrics, Data Structures, Statistical Prediction.

EXPERIENCE

Software Engineer

Mercor

Aug 2025 – Present

San Francisco, CA

- Built and maintained end-to-end bonus payment system for hundreds of contractors across Airtable, HEX, and Excel, validating and sending weekly payouts exceeding \$100K.
- Conducted over 1,000 code reviews on pull requests, giving feedback on correctness, performance, and security before being merged into production.
- Built performance and payout dashboards in Airtable and PowerBI to improve contractor visibility and reduce Support team work load.

Senior Frontend Developer, LLM Systems

[AI Company]

Jan 2025 – Jul 2025

San Francisco, CA

- Improved accuracy and pass rates of a large-scale, chat-based code assistant by developing targeted datasets that revealed common failure patterns in React/Next.js/FastAPI tasks.
- Reviewed and debugged hundreds of model-generated full-stack codebases, identifying issues in state management, accessibility, and performance.
- Resolved model-generated bugs across Django, sympy, scikit-learn, and other libraries, refining the model's behavior in realistic coding scenarios.
- Designed onboarding and review workflows for 200+ contributors, increasing throughput and output quality by ~30%.

Data Science Intern

Berkshire Hathaway Homestate Companies

June 2023 – May 2024

San Francisco, CA

- Identified \$15k/month in unused corporate phone and car expenses through automated reporting and presented findings directly to the CFO.
- Set up and evaluated LLMs (BART, Llama, MPT, Vulcan, etc.) in Databricks for internal use while maintaining strict client-data privacy.
- Built a sentiment-analysis system for client communications (Python + SQL) and integrated results into PowerBI dashboards used for ongoing internal monitoring.

Full-Stack Developer, Founder

GFXTtheory LLC

2017 – 2025

Remote

- Built and maintained production websites and design systems for clients in gaming, real estate, freight, and tech, using React, TypeScript, Tailwind, and standard web tooling.
- Delivered recurring development and UX work for companies with 50+ employees, focusing on usability, responsiveness, and maintainability.

PROJECTS

Serving Good Market Check-In System (React, TypeScript, Vite, Tailwind, Supabase, Edge Functions, Twilio)

- Community food market web app with SMS OTP sign-up (Twilio), day-of check-in with shopping-group choices, and an admin dashboard for members, schedules, check-ins, groups, and blacklist.
- Place-in-line numbers are assigned in batches after each check-in window via Supabase Edge Functions, shopping groups receive synchronized line numbers in one assignment run.
- Built with shadcn/ui, TanStack Query, React Hook Form, Zod, and PostgreSQL on Supabase (RLS), including optional scheduled assignment after windows close.

SKILLS

Programming: Python, JavaScript/TypeScript, Java, C, SQL, R

ML/AI: scikit-learn, Hugging Face Transformers, PyTorch, TensorFlow, PySpark, LLM fine-tuning, prompt engineering

Web Development: React, Next.js, Tailwind, Redux, Django, FastAPI, Node.js, REST APIs

Data/Infrastructure: ETL pipelines, Spark, SQLite, Supabase, Airtable, PostgreSQL, MySQL

Cloud/DevOps: GitHub Actions, Azure DevOps, basic AWS experience

Testing: Python unit testing (pytest/unitest)

Other: Git, Databricks, Snowflake, Google Cloud Platform, accessibility (WCAG, ARIA, semantic HTML), component libraries (e.g., MUI, shadcn)
