EDUCATION

University of California, Berkeley

B.A. in Data Science & Economics

Aug 2020 – May 2024

Berkeley, CA

- Coursework: Machine Learning, Probability, Econometrics, Data Structures, Statistical Prediction.

EXPERIENCE

Software Engineer

Mercor

Aug 2025 – Present

San Francisco, CA

- Built and maintained the end-to-end bonus payment system for one of the company's larger projects, validating and sending weekly payouts exceeding \$100K to hundreds of contractors across Airtable, HEX, and Excel.
- Design evaluation tasks that find where frontier AI models break on realistic software engineering work, writing the reference implementation and scoring rubric for each.
- Conducted over 1,000 code reviews on pull requests, giving feedback on correctness, performance, and security before being merged into production.

Full-Stack Developer, Founder

GFXTheory LLC

2017 – Present

Remote

- Shipped full-stack operations apps that businesses run on daily: customer check-in platforms, internal dashboards, and the admin tooling their teams work out of, built on Postgres with role-based access and audit logging.
- Built and maintained production websites and design systems for clients in gaming, real estate, freight, and tech, using React, TypeScript, Tailwind, and standard web tooling.
- Delivered recurring development and UX work for companies with 50+ employees, focusing on usability, responsiveness, and maintainability.

Senior Frontend Developer, LLM Systems

AI Company (under NDA)

Jan 2025 – Jul 2025

San Francisco, CA

- Improved accuracy and pass rates of a large-scale, chat-based code assistant by developing targeted datasets that revealed common failure patterns in React/Next.js/FastAPI tasks.
- Designed onboarding and review workflows for 200+ contributors, raising throughput and quality by ~30%.
- Reviewed and debugged hundreds of AI model-generated full-stack codebases across Django, sympy, scikit-learn, and other libraries, identifying issues in state management, accessibility, and performance.

Data Science Intern

Berkshire Hathaway Homestate Companies

Jun 2023 – May 2024

San Francisco, CA

- Identified \$15k/month in unused corporate phone and car expenses through automated reporting and presented findings directly to the CFO.
- Built a sentiment-analysis system for client communications (Python + SQL) and integrated results into PowerBI dashboards used for ongoing internal monitoring.
- Set up and evaluated LLMs (BART, Llama, MPT, Vulcan, etc.) in Databricks for internal use while maintaining strict client-data privacy.

PROJECTS

Serving Good Market Check-In System (React, TypeScript, Supabase, Twilio)

app.servinggood.org

- Check-in system a community food market runs on-site during market hours: passwordless phone auth over Twilio OTP, shopping-group selection at check-in, and a ten-screen admin dashboard for members, schedules, groups, messaging, blacklist, and QR scanning.
- Place-in-line numbers are assigned in batches by a scheduled Edge Function once each check-in window closes, so members in the same shopping group receive synchronized numbers in a single run.
- Postgres row-level security is the permission boundary: admin writes go through token-verified SECURITY DEFINER RPCs rather than direct table access, across 57 migrations and a Vitest suite.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Next.js, Vite, Tailwind, shadcn/ui, TanStack Query, React Hook Form, Zod, Vitest, accessibility (WCAG, ARIA, semantic HTML)

Backend & Data: PostgreSQL, Supabase (row-level security, Edge Functions), Drizzle ORM, FastAPI, Django, Node.js, REST APIs, pytest

Infrastructure: Cloudflare Workers, Netlify Functions, Vercel, Twilio, Databricks, Git

LLM Work: Evaluation task design and scoring rubrics, Hugging Face Transformers, prompt engineering
